# SMART CITY: AGROVI (LL) AGGIO TORINESE

### ANALYSIS ISSUES

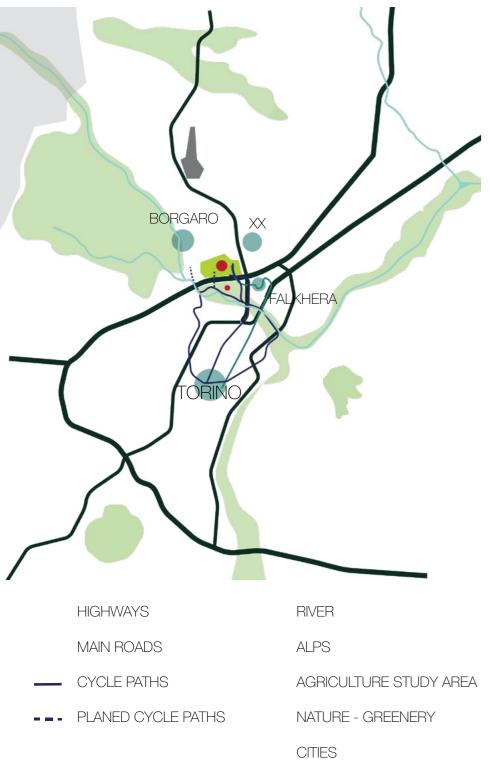

IP-UPWARD project represents an opportunity for urban and peri – urban agricultural areas as a reserve for new development. Students are called to submit project proposal over the chosen field of study, an 'agricultural park' located in the periphery north of Turin. Our group discussed this issues, looping for some recent case studies, selected among planning activity and practices arising from different European and American cities. The answer of Urban Planning to this need of rehabilitation brought to new methods and tools that outstripped the traditional planning approach, giving birth to a new practice of Urban mission 'the defense of agricultural as a public good'.
